

CHART 8519

Stream No. 30 (1 notice) Duck River, Galena Bay.

Is 50 feet wide and 18 inches deep.

The stream proper is swift water and I don't think the humps go up it much above high tide line.

It has a little glacier water in it.

It spreads out at mouth over a good gravel bar, covering a distance of about 500 feet across, with water from 3 to 5 inches deep. The fish about all spawn here.

It is at the head of a lagoon which goes dry at low tide for a distance of about 2,000 feet from high tide line.

About 600 feet up from the grass bank and on the N. W. side of the main stream, there is a small clear water stream which enters the large one.

Only accessible about 300 feet but good.

September 27, 1926.....enough dead fish in sight to justify an estimate of 20,000 fish.

1927.....no visit. Allowance made.

September 15, 1928.....131,000 humps, 60% alive.

October 1, 1929.....71,000, $1\frac{1}{2}\%$ chums.

September 29, 1930.....67,000, 3% chums.
